## COMPANY PROFILE

"Plamixx" is the manufacturer of Dry mix products based on Cement, Lime and Gypsum.

Dry Mix products are defined as factory made and quality controlled mixtures of binders, aggregates and special additives which are transported dry to the construction site and applied there after adding water.

In earlier times masonry mortar, render, plaster, screed or adhesives had to be mixed, prepared and processed by hand. These days, modern process technology allows premix of such products in large quantities and consistent quality. Each stage in production is monitored and controlled by PLC, recipe management and various quality control measures.
